Sport is a growing industry with enormous numbers of people now involved in the management and administration of sports, fitness and exercise. Whether voluntary, public or commercial sectors, all can benefit by improving the practice and delivery of the management of sport and its organisations. This text is designed to help all those delivering sport to deliver it better and includes:

- What's different and special about sports management?
- The voluntary sector
- Event management and marketing
- Marketing, fundraising and sponsorship
- Managing staff and volunteers
- Organisational management principles
- Legal issues including health and safety
- Case studies - both local and national.

Full of practical examples this book reveals sports management in action, showing how good management helps us to deliver better sports participation, at all levels. This book is a must for undergraduates as well as an invaluable tool for professionals in sport management and administration in the private public and voluntary sectors.

Metal foams are at the forefront of technological development for the automotive, aerospace, and other weight-dependent industries. They are formed by various methods, but the key facet of their manufacture is the inclusion of air or other gaseous pockets in the metal structure. The fact that gas pockets are present in their structure provides an obvious weight advantage over traditionally cast or machined solid metal components. The unique structure of metal foams also opens up more opportunities to improve on more complex methods of producing parts with space inclusions such as sand-casting. This guide provides information on the advantages metal foams possess, and the applications for which they may prove suitable. Offers a concise description of metal foams, their manufacture, and their advantages in industry Provides engineers with answers to pertinent questions surrounding metal foams Satisfies a major need in the market for information on the properties, performance, and applications of these materials
