A number which is of the form $a + ib$ where $a, b \in \mathbb{R}$ and $i^2 = -1$ is called a complex number and it is denoted by z . If $z = a + ib$ then a is called the real part of z and b is called the imaginary part of z and are denoted by $\text{Re}(z)$ and $\text{Im}(z)$. For example, if $z = 3 + 4i$ then $\text{Re}(z) = 3$ and $\text{Im}(z) = 4$. Note:

Equation (1.1) is the integral form of conservation of Q . It states that, for any region V , the rate of change of the total amount of Q in V is equal to the rate at which Q flows into through the boundary S plus the rate at which Q is generated by sources inside V . 1.2. Differential form Bringing the time derivative in (1.1) inside the integral over the fixed region

LECTURE NOTES ON APPLIED MATHEMATICS

Mathematics for Engineering is designed for students with little math backgrounds to learn Applied Mathematics in the most simple and effective way. The aim of this course is to provide students with the knowledge of not only mathematical

theories but also their real world applications so students understand how and when to use them.. This course is divided into 3 sections.

Free Math Tutorial - Mathematics for Engineering | Udemy

Applied mathematics is the application of mathematical methods by different fields such as physics, engineering, medicine, biology, business, computer science, and industry. Thus, applied mathematics is a combination of mathematical science and specialized knowledge. The term "applied mathematics" also describes the professional specialty in which mathematicians work on practical problems by ...
