Continuous And

Biologymad

Discontinuous variation is controlled by alleles of a single gene or a small number of genes.

The environment has little effect on this type of variation. Continuous variation In continuous variation there is a complete range of measurements from one extreme to the other.

Height is an example of

Continuous and  
discontinuous variation  
- BiologyMad

Variation is the differences between individuals within a species. This can be caused by inherited or environmental factors. Variation can be continuous or discontinuous.

Evolution. The main

difference between

continuous and

discontinuous variation

is that continuous

variation has no limit on

the value that can occur

within a population

while discontinuous

variation has distinct

groups for organisms to

belong to. [https://www.](https://www.differencebetween.com/difference-between-cont)
