instead on misguided liberalization. It analyzes the case of Korea's business conglomerates, the chaebol, with particular attention to the car industry, to show how liberalization contributed to the crisis even at the level of the firm. It shows how those firms that had developed innovative capabilities survived the crisis much better than those that had merely expanded into markets opened up by liberalization.

Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting

specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three

This book, first published in 1988, considers the problems that developing countries face when importing technology from abroad. The major issues - technical, economic, political - are analysed in the case of one particular country: Korea. The book describes the negotiations with the foreign companies that controlled the desired technology, the building of the plants, the training of engineers and managers to replace expatriots, the improvements of processes and products and the maintenance of efficient and profitable production. In their research the authors were given access to information usually kept confidential - government memoranda and minutes, company contacts and records,

costs and prices. The book also considers how typical of the developing countries Korea is, and the authors make certain policy recommendations for the future.

This set examines a vast range of topics covering all experiences of business and economics from across Asia. Dealing with early banking systems in China; the industrialisation of Korea and Taiwan; the evolution of Japanese business practices; economic development; protectionist policies; industrial investment; trade; tourism; and a host of other topics, the books collected here form a vital reference resource across a wide subject area.

This book offers a comprehensive and timely overview of internal combustion engines for use in marine environments. It reviews the development of modern four-stroke marine engines, gas and gas–diesel engines and low-speed two-stroke crosshead engines, describing their application areas and providing readers with a useful snapshot of their technical features, e.g. their dimensions, weights, cylinder arrangements, cylinder capabilities, rotation speeds, and exhaust gas temperatures. For each marine engine, information is provided on the manufacturer, historical background, development and technical characteristics of the manufacturer's most popular models, and detailed drawings of the engine, depicting its main design features. This book

offers a unique, self-contained reference guide for engineers and professionals involved in shipbuilding. At the same time, it is intended to support students at maritime academies and university students in naval architecture/marine engineering with their design projects at both master and graduate levels, thus filling an important gap in the literature.
