This book examines how, within foreign policy, perceptions are a reflection of an actor's conception of status, credibility and legitimacy, within the context of EU-Ukraine relations and the Ukraine crisis.

Integrating theory and case studies, this cogent text explores the processes and factors that shape foreign policy. Following a levels-of-analysis organization, Neack considers all elements that influence foreign policy, including the role of leaders, bargaining, national image, political culture, public opinion, the media, and nonstate actors.

This book outlines a new approach to the analysis of decision making based on "cognitive maps." A cognitive map is a graphic representation intended to capture the structure of a decision maker's stated beliefs about a particular problem. Following introductory chapters that develop the theory and techniques of cognitive mapping, a set of five empirical studies applies these new techniques to five policy areas. New York magazine was born in 1968 after a run as an insert of the New York Herald Tribune and quickly made a place for itself as the trusted resource for readers across the country. With award-winning writing and photography covering everything from politics and food to theater and fashion, the magazine's consistent mission has been to reflect back to its audience the energy and excitement of the city itself, while celebrating New York as both a place and an idea.

The use of wedge issues such as abortion, gay marriage, and immigration has become standard political strategy in contemporary presidential campaigns. Why do candidates use such divisive appeals? Who in the electorate is persuaded by these controversial issues? And what are the consequences for American democracy? In this provocative and engaging analysis of presidential campaigns, Sunshine Hillygus and Todd Shields identify the types of citizens responsive to campaign information, the reasons they are responsive, and the tactics candidates use to sway these pivotal voters. The Persuadable Voter shows how emerging information technologies have changed the way candidates communicate, who they target, and what issues they talk about. As Hillygus and Shields explore the complex relationships between candidates, voters, and technology, they reveal potentially troubling results for political equality and democratic governance. The Persuadable Voter examines recent and historical campaigns using a wealth of data from national surveys, experimental research, campaign advertising, archival work, and interviews with campaign practitioners. With its rigorous multimethod approach and broad theoretical perspective, the book offers a timely and thorough understanding of voter decision making, candidate strategy, and the dynamics of presidential campaigns.

The contributors reflect critically on security studies since the 1980s. They conclude that analysts and policy-makers have not been able to respond well to the changes that have occurred and that they must revise their approach if they are to meet the challenges of the future.

Strategic studies as a field of civilian scholarship has developed along distinctive lines in the United States since World War II. The rapid proliferation and increasing sophistication of weapons technology have required constant revision of strategic theory, while the shifting political climate, both internationally and in the United States, has had an equally powerful impact. One of the field's leading theorists now examines the history and development of American strategic studies, the varied roles assumed by civilian strategists, and their relationship with those charged with developing and carrying out American military and diplomatic policy. This provocative book clearly demonstrates the importance of a sound strategic theory if America is to survive in an age of high arms technology and increased world tensions.
