High-velocity change is the fundamental challenge facing companies today. Few companies, however, are prepared to continuously innovate because they focus on the short-term and do not emphasize the wisdom needed to make sure that their interests are aligned with those of society. Practical wisdom is the bases of continuous innovation, where companies ceaselessly and repeatedly creating new

knowledge, disseminating it throughout the organization, and converting knowledge to action over time. In *The Wise Company*, legendary management experts Ikujiro Nonaka and Hirotaka Takeuchi highlight how various companies have confronted the challenge of rapid change to create new products and new ways of doing business that benefit employees, consumers, and society. The key: a relentless self-renewal process where companies realize the future they envision, rather than only responding to changes in the environment. Nonaka and Takeuchi argue that while knowledge-creating companies focusing on tacit and explicit knowledge can generate innovation, they cannot create it on a continuous and ongoing basis without having wisdom about human interactions and how they influence organizational structures and practices. Companies that have resilience, longevity, and sustainability share a number of characteristics, Nonaka and Takeuchi show. Strategies are based on alignment of organizational and societal benefits. Leaders grasp the core of any situation or problem quickly, and intuitively comprehend the nature and meaning of people, things, and events. But wise leadership is not enough: wisdom must infuse the organization through informal as well as formal shared interactions and communications that focus on metaphors and stories that convey the essence and meaning of strategies and actions. In short, Nonaka and Takeuchi demonstrate how continuous innovation results from companies ceaselessly and repeatedly creating new knowledge, disseminating knowledge throughout the organization, and converting that knowledge to action. *The Wise Company* presents a new model of knowledge-creation and practice for the twenty-first century.

Walk into a classroom in Tokyo, New York, London or Rotterdam, and the similarities in structure, activity, purpose and style will outweigh differences in language, dress and ethnic characteristics. Learning is regulated and rationed, teaching is a process or one-way transmission of knowledge, students need to be docile and conformist, assessment needs to sift and sort the bright from the not-so-bright, and rewards will be given to those who successfully negotiate this regime. But are these the kinds of places that can meet the needs of the 'net generation'? The Changing Role of Schools in Asian Societies is concerned with the debate about the nature of modern schooling in Asia. Traditionally schools are historical constructions reflecting the social, economic and political needs of the societies that invest in them. As Asia faces the challenges posed by the 'knowledge economy', its schools have taken on a new and quite different importance. This informative book outlines the broad policy contexts in which these transformations are taking place and the practical strategies that are needed to meet this objective. The authors argue that the future of Asian societies depends on a transformation that requires a fundamental restructuring of schools as we know them while maintaining their long-held cultural values. This valuable insight: provides an overview of educational issues in Asian societies establishes a broad theoretical framework in which these issues can be understood contextualizes issues by providing country case studies acknowledges the important role of culture influencing educational priorities. It should be of interest to all those working in education policy and comparative education.
