Life On Earth Dot Point Answers

The fossil record tells us that life on Earth has lasted at least 3.5 billion years (the Earth is about 4.54 billion years old), with the oldest physical traces of life dating back 3.7 billion years. And, if some kind of disaster doesn't intervene , our planet should continue to host life for at least another 1.75 billion years.

8 Things that make Life on Earth Possible - Our Planet

A study of Earth's "solar neighborhood" finds over 1,000 solar systems have the perfect angle to view our planet. Study co-author Lisa Kaltenegger says their list focuses on main-sequence stars similar to the sun. These solar systems may contains exoplanets, Earth-like worlds sitting in the habitable zone for life.

Are aliens watching us? Many exoplanets may be able to see ...

A new study makes that point by identifying more than 1,000 nearby stars that are favorably positioned for spotting life on Earth.
