Epilepsy is a type of neurological disorder known for causing seizures. These seizures can be sporadic and occur without warning, or they might be chronic and occur on a regular basis. According to...

### Long-Term Prognosis for Epilepsy and Seizure Disorders

Hippocampal sclerosis was associated with a good outcome but declined in relative frequency over the years. Conclusion: The vast majority of patients who were not seizure free experienced at least a substantial and long-lasting reduction in seizure frequency. A positive long-term outcome after epilepsy surgery is possible for many patients and especially those with hippocampal sclerosis or those who had anterior temporal lobe resections.

### The long-term outcomes of epilepsy surgery

The long-term outcome is often predictable by observation of the early outcome of seizures. One third of children with epilepsy are mentally retarded. Poor social outcome is related to associated neurological disabilities, drug resistant seizures and polytherapy.
