These minerals are inert and non-reactive and present in deep layers of earth or the oceans. On extraction from the earth, these minerals are purified and isolated to produce the actual elements needed. Minerals are mostly extracted to isolate metals like gold, silver, copper, iron, lead, mercury, etc.

Iron is present mainly as part of hemoglobin, the oxygen-carrying pigment of the red blood cells. Other mineral constituents of the body, found in minute but necessary concentrations, include cobalt, copper, iodine, manganese, and zinc. Organization of the body The cell is the basic living unit of the human body—indeed, of all organisms.
