The capability of a mobility model to detect certain patterns of user behavior (e.g., favorite walks or walking habits) enables solutions for a number of challenging networking problems, including efficient opportunistic communications and handoff/cellular planning. We argue that the limited viewpoint of a single mobile node and its scarce resources (e.g., energy, memory or processing) are ...

Download Free Le And Wireless Communications Ifip Tc6 Wg68 Working on ... Conference On Personal Wireless

The Internet is being extended beyond its traditional boundaries through gradually incorporating a wide-range of challenging networks and autonomous devices. From traditional wireless networks to opportunistic networks of mobile devices in urban environments and deep-space communications, the new approaches require an efficient merging with the traditional wired infrastructure.

In the era of the Unmanned Aerial Vehicles (UAVs) several kinds of applications were born to make use of these autonomous vehicles, from surveillance to emergency management, from entertainment to package delivery. All these systems are based on the autonomous capability of the unmanned vehicles. The common factor of such systems is the use of an ad-hoc wireless network that enables the ...
