Every banking crisis, whatever its particular circumstances, has two features in common with every previous one. Each has been preceded by a period of excessive monetary ease, and by ill thought out regulatory changes. For many the recent hiatus in inter-bank lending has been seen as a blip - enormous in size and global in scope, but, nonetheless, a blip. Finance at the Threshold offers a unique perspective from an English economic and monetary historian. In it the author asks: Why did the banks stop lending to one another, and why now? Was it merely a matter of over-loose credit due to the relaxation of traditional prudence, or did global finance find itself at its limits? Have government bail-outs saved the day or merely postponed the problem? Christopher Houghton Budd offers a radical view of the global financial crisis, spanning a wide gamut of current thinking. He argues that we need, above all, to overcome the left-right divide so much taken for granted today, and promote financial literacy to young people. His contribution to the Transformation and Innovation Series claims that global finance has brought us to the limits of what mechanistic economic explanations can capture. New ideas and above all new instruments are needed so that innovation can shift from its dexterous exploitation of inefficiencies and turn its attention instead to fresh initiative. Finance at the Threshold is essential reading for academics and practitioners concerned with financial and economic policy and needing to develop a sense of the history thus understanding the forward prospects for global finance.

When was the human threshold crossed? What is the evidence for evolving humans and their emerging humanity? This volume explores in a global overview the archaeology of the Middle Pleistocene, 800,000 to 130,000 years ago when evidence for innovative cultural behaviour appeared. The evidence shows that the threshold was crossed slowly, by a variety of human ancestors, and was not confined to one part of the Old World. Crossing the Human Threshold examines the changing evidence during this period for the use of place, landscape and technology. It focuses on the emergence of persistent places, and associated developments in tool use, hunting strategies and the control of fire, represented across the Old World by deeply stratified cave sites. These include the most important sites for the archaeology of human origins in the Levant, South Africa, Asia and Europe, presented here as evidence for innovation in landscape-thinking during the Middle Pleistocene. The volume also examines persistence at open locales through a cutting-edge review of the archaeology of Northern France and England. Crossing the Human Threshold is for the worldwide community of students and researchers studying early hominins and human evolution. It presents new archaeological data. It frames the evidence within current debates to understand the differences and similarities between ourselves and our ancient ancestors.

Over the last decade the notion of ' threshold concepts ' has proved influential around the world as a powerful means of exploring and discussing the key points of transformation that students experience in their higher education courses and the ' troublesome knowledge ' that these often present.

First published in 1992, Routledge is an imprint of Taylor & Francis, an informa company.

The Trinity is supposed to be the central, foundational doctrine of our entire Christian belief system, yet we're often told that we shouldn't attempt to understand it because it is a ' mystery '. Should we presume to try to breach this mystery? If we could, how would it transform our relationship with God and renew our lives? The word Trinity is not found in the New Testament—it wasn't until the third century that early Christian father Tertullian coined it—but the idea of Father, Son, and Holy Spirit was present in Jesus' life and teachings and from the very beginning of the Christian experience. In the pages of this book, internationally recognized teacher Richard Rohr circles around this most paradoxical idea as he explores the nature of God—circling around being an apt metaphor for this mystery we're trying to apprehend. Early Christians who came to be known as the ' Desert Mothers and Fathers ' applied the Greek verb perichoresis to the mystery of the Trinity. The best translation of this odd-sounding word is dancing. Our word choreography comes from the same root. Although these early Christians gave us some highly conceptualized thinking on the life of the Trinity, the best they could say, again and again, was, Whatever is going on in God is a flow—it's like a dance. But God is not a dancer—He is the dance itself. That idea might sound novel, but it is about as traditional as you can get. God is the dance itself, and He invites you to be a part of that dance. Are you ready to join in?
