Crayfish Dissection Like all crustaceans, a crayfish has a fairly hard exoskeleton that covers its body. As shown in Figure 1, the body is divided into two main parts, the cephalothorax and the abdomen. The cephalothorax consists of the cephalic (head) region and the thoracic region.

Answers To Crayfish Dissection Worksheet | www.dougnukem

Place a crayfish on its side in a dissection tray. Use the diagram below to locate the cephalothorax and the abdomen. The carapace, a shield of chitin, covers the dorsal surface of the cephalothorax. On the carapace, observe an indentation, the cervical groove, that extends across the midregion and separates the head and thoracic regions.

Crayfish External Anatomy - PurposeGames.com

Dissection (from Latin *dissecare* "to cut to pieces"; also called anatomization) is the dismembering of the body of a deceased animal or plant to study its anatomical structure. Autopsy is used in pathology and forensic medicine to determine the cause of death in humans. Less extensive dissection of plants and smaller animals preserved in a formaldehyde solution is typically carried out or ...
