The Savonius turbine is one of the simplest turbines. Aerodynamically, it is a drag-type device, consisting of two or three scoops. Looking down on the rotor from above, a two-scoop machine would look like an "S" shape in cross section. Because of the curvature, the scoops experience less drag when moving against the wind than when moving with the wind.

Savonius Wind Turbines Archives - Residential Wind Turbines

In this type, the wind pushes the blades, indicating that the rotational speed is always less than wind speed. The idea of the Savonius Wind Turbine was presented by "Sigrid Johannes Savonis" in 1992. But it was not used for many years. However, today, it is one of the most popular types of urban turbines.

Savonius Turbine | WindMax

A Savonius is a type of vertical axis wind turbine (VAWT) generator invented in 1922 by Sigurd Johannes Savonius from Finland though similar wind turbine designs had been attempted in previous centuries. The Savonius is a drag-type VAWT which operates in the same way as a cup anemometer (pictured below).
